AZHAD GHUFRAN

Backend-Focused Full Stack Developer

Delhi, India | +91-8851670802 | azhad.ghufran56@gmail.com

GitHub | LinkedIn | Portfolio

PROFESSIONAL SUMMARY

Results-driven **backend-focused full-stack developer** with **5 years of experience** building scalable, high-quality web applications. Strong expertise in designing and implementing **robust APIs, business logic, authentication, and database-driven systems**, with hands-on experience across **AWS and GCP**. Experienced in end-to-end ownership, code reviews, and cross-functional collaboration to ensure timely delivery and project success. Proficient with AI-powered development tools like **GitHub Copilot** and **Cursor** to enhance productivity and code quality.

SKILLS

Computer Languages: **JavaScript, TypeScript**

Software Modules: **Node.js, NestJS, ExpressJS, GraphQL, ReactJS**

Databases: **MongoDB, PostgreSQL, MYSQL**

Cloud Platforms: **AWS, GCP**

Services & Tools: **Amazon S3, ECS, SQS, Google Pub/Sub, Apache Kafka**

Other Tools: **Cursor, Datadog, Kibana, Sentry, JIRA, GitHub, Postman, BitBucket, Jenkins**

EXPERIENCE

Zamplitude *Senior Software Engineer - Backend, Full Time* **Feb 2026 - Present**

- Designed and built Tamra, a Saudi fintech KYC/AML customer onboarding platform as a suite of 10+ NestJS microservices, covering user registration, identity verification, risk scoring, questionnaire management, compliance approvals, notifications, and a compliance admin dashboard.
- Engineered a Temporal-orchestrated onboarding pipeline (UserOnboardingWorkflow, EDDProcessWorkflow, RiskRecalculationWorkflow) coordinating across services — KYC, risk engine, approval, and notifications — replacing ad-hoc HTTP chains with durable, fault-tolerant workflows.
- Integrated Saudi third-party identity providers — Yakeen (national identity enrichment & address verification), FinScan (AML/PEP screening), and Nafath (MFA/lost-phone recovery) — with a local mock service replicating all provider scenarios (success, match, timeout) for development and testing without hitting live APIs.
- Built a dynamic risk scoring engine with admin-configurable composite rules (nationality bands, ID expiry, AML status, questionnaire answer scores), producing 5-band risk categories with review cadence, and a multi-step approval chain (Compliance → CEO) for EDD cases with full audit history and decision tracking.
- Designed a Question Management System (QMS) with version-controlled question lifecycle (draft → compliance-approved → active/rejected), conditional question rendering by KYC place, and dual-service approval callbacks between QMS and the approval service.
- Implemented RBAC-secured admin infrastructure across services with JWT + Passport auth, role/permission CRUD, OTP-based session management with Redis-backed denylist and login lockout, PII encryption (AES-256-CBC) for all identity fields, and structured Pino logging with Swagger documentation.
- Built the Tamra compliance dashboard (React 19, Vite, MUI, Redux Toolkit, TanStack Query) featuring review queues, CEO approval flows, EDD library management, admin RBAC configuration, and KYC question lifecycle management.

Tools & Technologies: *NestJS, TypeScript, Temporal, Prisma, MySQL, Redis, Firebase FCM, React 19, Redux Toolkit, Vite, MUI, Yakeen, FinScan, Nafath, Docker, JWT, Swagger, Pino.*

upGrad *SDE-2, Full Time* **Sep 2024 - Feb 2026**

- Built a Practice Test System, created interview page CMS resources, and migrated SQL-based questions, answers, and interview content from external platforms to MongoDB, reducing manual content effort.
- Implemented a dynamic footer data system driven by page type and page slug-level conditions across upGrad and Study Abroad platforms, improving SEO consistency and control.

- Developed advanced CMS features including bulk meta tag creation and updates, bulk upload reporting, AI-generated content guidelines, Kafka-based row-level processing, multi-type media uploads, file replacement, and copy-link support.
- Designed reusable layouts and section templates, optimized GraphQL performance using indexing, caching, and query tuning, and built scalable backend architecture with ChatGPT-4o, DALL·E, and AI-powered game integrations.
- Scaled the CMS from domestic to international usage, implemented a middleware-based changelog system tracking who changed what and when with before/after data, and built app version control to force iOS and Android updates via CMS.

Tools & Technologies: *Nest.js, GraphQL, Instana, MongoDB, ChatGPT-4o, Kafka, Cursor.*

ShopDeck *Member of Technical Staff, Full Time* **Oct 2021 - Sep 2024**

- Built and maintained ShopDeck's dashboard, including order processing, returns (RTO), profit/loss, finance tools, and shipping calculators.
- Developed custom React components with Ant Design; optimized performance using lazy loading.
- Implemented backend systems for order returns, tracking, downloads (CSV/PDF), and automated messaging via Gupshup.
- Created a changelog system with Slack alerts and database logging for system updates.
- Managed invoice generation, shipping labels, and credit notes.
- Resolved production issues quickly by monitoring error channels and coordinating with developers.
- Wrote 20+ JavaScript scripts for data backfilling, CSV imports, task automation, and bots.
- Built Python DAGs for automated settings management and Slack reporting.

Tools & Technologies: *MERN, Ant Design React Library, Sentry, Kibana, Postman, Jira, Cron.*

EDUCATION

B.Sc. (Hons.) Computer Science

Shaheed Sukhdev College of Business Studies, University of Delhi
